

Twitter Analytics Dashboard – Project Documentation

1. Dataset Used

Item	Description
Dataset Name	SocialMedia Dataset

Main Columns Used

Item	Description
Tweet	Tweet text
NEW DATE	Tweet date
NEW TIME	Tweet time
impressions	Tweet impressions
engagement rate	Engagement metric
replies	Reply count
retweets	Retweet count
likes	Like count
media views	Media interaction
media engagements	Media engagement
url clicks	URL interactions
user profile clicks	Profile visits
hashtag clicks	Hashtag interaction

2. Transformations Applied

Item	Description
Extracted NEW DATE	Separate date from datetime
Extracted NEW TIME	Separate time from datetime
Created Month Name	Monthly trend analysis
Created Month Number	Proper month sorting
Created Day of Week	Weekly analysis

Custom Columns / Measures Created

Item	Description
Interaction Filter	Identify tweets with interactions
Even Impression	Filter even impressions
Odd Date	Filter odd dates
Word Count	Count words in tweet
Word Count Filter	Filter based on word count
Media Content	Separate media vs non-media tweets
Total Engagement	retweets + likes
Weekday Filter	Exclude weekends
Show Visual	Time-based visibility control

3. KPIs Measured

Item	Description
URL Clicks	Link interaction count
User Profile Clicks	Profile visits
Hashtag Clicks	Hashtag interactions
Engagement Rate	User engagement performance
Media Views	Number of media views
Media Engagements	Media interaction level
Replies	Tweet responses
Retweets	Content shares
Likes	Audience appreciation
Total Engagement	Combined likes + retweets

Project 1 — Tweet Interaction Breakdown by Category

Objective: Analyse interaction behaviour across tweet categories.

Visualisation Used: Clustered Bar Chart

KPIs Measured

- URL Clicks
- User Profile Clicks
- Hashtag Clicks

Filters Applied

Filter	Condition
Interaction Filter	At least one interaction
Odd/Even Date	Even dates only
Word Count	Greater than 40
Time Visibility	Visible only between 3 PM–5 PM IST

Insights Generated

- Identified tweet categories generating higher interaction.
- Compared hashtag vs URL engagement performance.

Project 2 — Engagement Rate Comparison

Objective: Compare engagement rate between tweets with app opens and without app opens.

Visualisation Used: Line / Bar Comparison Chart

KPIs Measured

- Average Engagement Rate

Filters Applied

Filter	Condition
Posting Time	9 AM–5 PM
Weekday Filter	Weekdays only
Even Impressions	Applied
Odd Dates	Applied
Character Count	Above 30
Contains D	Excluded
Visual Timing	7 AM–11 AM & 12 PM–6 PM IST

Insights Generated

- Measured influence of app opens on engagement.
- Compared engagement performance during working hours.

Project 3 — Media Interaction by Day of Week

Objective: Analyse media performance across weekdays.

Visualisation Used: Dual-Axis Chart

KPIs Measured

- Media Views
- Media Engagements

Filters Applied

Filter	Condition
Relative Date	Last Quarter
Even Impressions	Applied
Odd Dates	Applied
Character Count	Above 30
Contains H	Excluded
Time Visibility	3 PM–5 PM & 7 AM–11 AM IST

Insights Generated

- Identified peak engagement weekdays.
- Detected spikes in media interaction.

Project 4 — Replies, Retweets, and Likes Comparison

Objective: Compare overall engagement metrics.

Visualisation Used: Clustered Bar Chart

KPIs Measured

- Sum of Replies
- Sum of Retweets
- Sum of Likes

Filters Applied

Filter	Condition
Date Filter	June–August 2020

Insights Generated

- Compared audience interaction types.
- Measured most common engagement behaviour.

Project 5 — Monthly Engagement Rate Trend

Objective: Track monthly engagement trends for media vs non-media tweets.

Visualisation Used: Line Chart

KPIs Measured

- Average Engagement Rate

Filters Applied

Filter

Media Content

Month Sorting

Condition

With Media vs Without Media

Month Number used

Insights Generated

- Compared engagement trends over time.
- Identified whether media tweets perform better.

Project 6 — Top 10 Tweets by Engagement

Objective: Identify highest-performing tweets.

Visualisation Used: Clustered Bar Chart

KPIs Measured

- Total Engagement
- Retweets
- Likes

Filters Applied

Filter	Condition
Weekday Filter	Excluded weekends
Even Impressions	Applied
Odd Dates	Applied
Word Count	Less than 30
Top N Filter	Top 10 Tweets
Time Visibility	3 PM–5 PM IST

Insights Generated

- Identified top-performing tweets.
- Compared creator engagement performance.
- Evaluated high-engagement tweet characteristics.

Overall Learning Outcomes

- Data Cleaning
- Data Transformation
- DAX Calculations
- Conditional Filtering
- Time-based Visual Control
- KPI Analysis
- Interactive Dashboard Design
- Trend Analysis
- Comparative Analytics
- Top-N Filtering
- Data Visualisation Techniques
